

Dear Dr. Tony English,

Thank you for all your hard work in putting the camp together. I had a great time. I hope to come next year. My favorite part was the liquid nitrogen. The computers were fun too. The most interesting thing I learned at camp was about the cells. Coming to this free camp was important to me because only a certain number of people got to come. I found everything in the soils lab interesting. Especially the clay we got to play with. The computer work we did inspired me to become a Computer Technician. Thanks Tony for everything hope you have the camp next year.

Sincerely,  
T.J.  
Marlow

Dear: Dr. Tony English

Thank you for letting me come to the engineering camp over the summer. I know for this camp you took time out of your summer to help me. The camp was a lot of fun to go to. I liked that we got to do hands on experiments. My favorite experiment was the liquid nitrogen. Tony was funny and nice threw the whole camp. When we did the computer animation that was really cool. The only thing I didn't like was that it was so short next year I would like it to be long than it was. I thought the lab we went to was very cool and high tech. I learned something that will help me in life because I want to be an engineer. There are many different and types of soil that can cause problems with buildings Struthers when they are built.

Sincerely

Dale D. Cockrell (Hutchens)
